

29 April 1958

MEMORANDUM FOR: Major Charles H. Randall USAF  
AFCIN - 4A1B  
ATIC  
Wright-Patterson Air Force Base  
Dayton, Ohio

SUBJECT: Suggested Itinerary Item for Your Forthcoming  
European Trip

1. Your forthcoming European trip suggests to me that you might be concerned with gathering advanced information on the photogrammetric - geodetic disciplines of aerotriangulation and control extension.

2. If this presumption is correct I would suggest that you consider visiting Prof. Dr. Bertil Hallert  
Royal Institute of Technology  
Stockholm 70, Sweden

Dr. Hallert speaks English fluently, was posted to Ohio State on a Fulbright Fellowship in 1955-6 and is in my opinion an expert on aerotriangulation. Further, he has traveled extensively, not only in the USA, but over most of Europe and is intimately familiar with the methods and results achieved by most of the other specialists in this field. He has hundreds of friends in the USA and has published extensively in Photogrammetric Engineering as well as foreign journals. If you wanted to speak to someone in your area who knows most details about his work I would suggest you contact Professor Frederick J. Doyle at the Ohio State Mapping Charting and Research Foundation, Columbus, Ohio. Fred worked with Dr. Hallert during his tour at Ohio State and has detailed knowledge of his contributions to the control extension problem.

3. I trust that the foregoing information might prove useful and that you will let me know if you are in need of any additional details.

ARTHUR C. LUNDAHL  
Chairman, JCS-PSS  
Joint Working Committee
